## 4. Technical Details

### 4.1. Block diagram

eMotionNT5:3 Block Diagram

### 4.2. Supply voltages and current consumption

The eMotionNT5:3 can handle 12V or 24V DC input voltage. The board is designed for a single power supply. All other supply voltages are generated on the eMotionNT5:3.

Supply voltage	Nominal value	Regulation	Ripple & noise	Onboard current consumption
+12V	+12V	+/-10%	0.3V	200mA max.
+24V	+24V	+/-10%	0.3V	100mA max.

The output voltage for the backlight inverter (X101) can be set to the DC input voltage V\_IN of the eMotionNT5:3 (X100 resp. X102) or to +12V when V\_IN is +24V. For these setting see chapter [3.14 BLT\\_VCC-Select](#) and [4.5 Backlight Inverter Supply](#).

### 4.3. Configuration Options on eMotionNT5:3

eMotionNT5:3 can drive panels with different values for TCON-supply-voltage. Additionally backlight inverters with different values for backlight PWM-voltage / backlight enable-voltage and backlight logic-level can be driven.

Values for TCON-supply-voltage / backlight PWM-voltage and backlight enable voltage will be set by firmware on eMotionNT5:3! I.e. to ensure functionality of connected TFT it is necessary to program the correct firmware on eMotionNT5:3 first!

Backlight enable-logic-level is set by OR-resistor (hardware mounting option)

Possible adjustments:

Value	Can be set to...		
TCON-supply-voltage	+3V3	+5V	+12V
Backlight PWM-voltage	+3V3	+5V	
Backlight enable voltage	+3V3	+5V	
Backlight enable-logic-level	Active high (default)	Active low (mounting option)	

### 4.4. TCON-current capability of eMotionNT5:3

eMotionNT5:3 can deliver the following supply currents to a connected TCON-board

TCON Voltage	Nominal value	Max Current (total)	Ripple & noise
+3V3	3V3	3A	0.1V
+5V	5V	3A	0.1V
+12V	12V	3A	0.1V

TCON-voltage is supplied to TCON-board by pins with signal Panel VCC on X106

#### 4.5. Backlight Inverter Supply

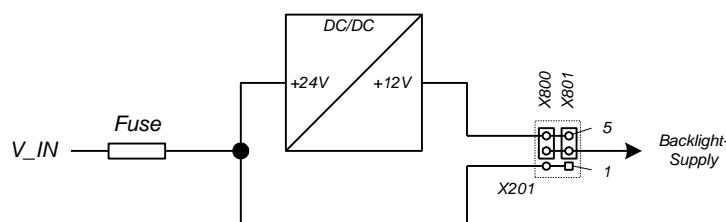

There are very many backlight inverters available for driving TFT backlights. Supply voltage for these inverters can be different.

Amongst others backlight inverters can operate with input voltages of +12V or +24V or have an input range from +12V to +24V. These inverters can be driven by eMotionNT5:3.

To handle the different backlight inverters the backlight supply voltage can be routed in 2 different ways on eMotionNT5:3:

- Input voltage (V\_IN) supplies DC/DC-regulator and output of this regulator ist backlight supply voltage
- Input voltage (V\_IN) is directly connect to backlight inverter supply input

The routing can be set by the user by setting jumper cabs X800, X801 on connector X201:

Depending on eMotionNT5:3 input voltage and required input voltage for the backlight inverter the jumpers on X201 have to be set in the following way:

V_IN	BLT_VCC	Jumper-Position on X201
+12V	+12V	1-3; 2-4
	+12V...+24V	1-3; 2-4
	+24V	Not possible
+24V	+12V	3-5; 4-6
	+12V...+24V	1-3; 2-4
	+24V	1-3; 2-4

#### 4.6. Backlight-current capability of eMotionNT5:3

Output current of eMotionNT5:3 for a connected backlight inverter depends on configuration of eMotionNT5:3:

- If jumper cabs X800, X801 are mounted to 3-5 and 4-6 on X201, i.e. Vin=+24V and V\_BL=+12V (see chapter above), the output current is limited to 3A
- If onboard regulator for BLT\_VCC is not used, i.e. BLT\_VCC =V\_IN, the sum of output current for BLT\_VCC, the onboard current consumption and the TCON-board current consumption may not exceed the current capability of used input connector for V\_IN.

#### 4.8. Serial Communication with eMotionNT5:3

The eMotionNT5:3 can be controlled by RS232 commands which can be send by COM-port of PC e.g..

RS232-signals RxD and TxD at X109 should have LVTTL-level.

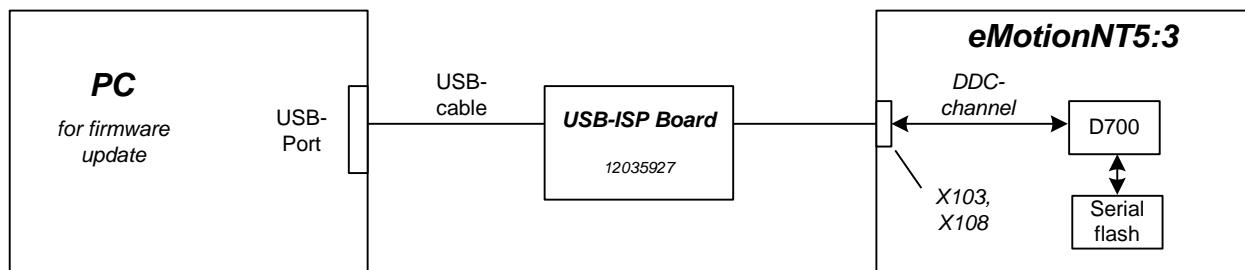

⇒ for communication an external level converter is needed!

#### 4.9. Firmware Update on eMotionNT5:3

Firmware update on eMotionNT5:3 is done over DDC-channel of video-inputs HDMI or VGA. An USB-ISP Board is necessary for this operation!

This board is connected to PC with USB2.0 cable and to eMotionNT5:3 with videocable to input HDMI or VGA.

Details for firmware update on request.

### 5.2. EMI-Standards

Designed to meet EMC (Electro-Magnetic Compatibility): Emission standard for industrial environments, according to EN 61000-6-4 and Immunity for industrial environments, according to EN 61000-6-2:

Description	Requirements	Test parameter	Criteria
Electromagnetic compatibility of multimedia equipment - Emission Requirements	EN 55032		Class A
Electrostatic discharge immunity test	EN 61000-4-2	±4 kV contact discharge, ±8 kV air discharge	Criteria B
Radiated, radio frequency, electromagnetic field immunity test	EN 61000-4-3	80-1000 MHz 10 V/m, 1,4-2 GHz 3 V/m 2-6 GHz 1 V/m 80 % AM (1 kHz)	Criteria A
Electrical fast transient/burst immunity test	EN 61000-4-4	±1 kV on I/O lines	Criteria B
Immunity to conducted disturbance, induced by radio-frequency fields	EN 61000-4-6	0,15 – 80 MHz 10 V <sub>rms</sub> 80 % AM (1 kHz)	Criteria A
Immunity to magnetic field	EN 61000-4-8	30 A/m	Criteria A

Note: To ensure that the board meets the standard mentioned above, an adequate shielding cover must be added. Alternatively, the housing of the monitor must act as shielding cover (e.g. aluminum enclosure).
