

# Customised special solutions - a key component in DATA MODUL's portfolio

Munich, 17<sup>th</sup> May 2021

In addition to its extensive standard portfolio of renowned manufacturers, DATA MODUL also offers the option of realising display, touch, embedded and system solutions according to individual customer requirements. Customer-specific developments are increasingly in demand, as they are used wherever standard solutions cannot be integrated, for example due to limited assembly space, stringent hygiene requirements or special design specifications. DATA MODUL's expert teams advise customers on the selection of suitable components which are optimally matched to the requirements of the respective application area. Because they are comparatively easy to clean, housing solutions made of plastic or metal are ideal for hygienically sensitive areas such as hospitals, for example. However, the exterior also plays an increasingly important role in product development and implementation. Complex product designs can be combined with high-performance displays to create modern applications.

“Thanks to our many years of experience, expertise and the latest technologies, we are able to offer our customers bespoke special solutions that are perfectly tailored to their needs,” says Frank Dettweiler, Product Manager Industrial Division at DATA MODUL. “Not only the customers’ requirements with regard to exterior and technology play a decisive role - other limiting factors, such as compliance with EMC standards or limited assembly heights, also need due consideration when putting together the right components. 3D-printed housing parts prototypes or our own existing platforms enable us to develop suitable solutions for our customers quickly and cost-effectively, even when confronted with difficult requirements.”

As an ideal technology partner, DATA MODUL supports customers from the consultation phase through the specification phase and the production of the special solutions to after-sales services. DATA MODUL offers on request approvals and validation for the custom specific unit.

## About DATA MODUL

DATA MODUL AG is one of the world's leading specialist providers of display, touch, embedded, monitor and panel PC solutions. Since it was established in 1972, it has consistently pursued the objective of providing its customers with state-of-the-art, tailor-made and individually customised complete solutions for display technologies.

Many years of experience in the field of display, touch, embedded and system technologies enable the company to produce customer-specific value-added services for a variety of industries at its 45,000 m<sup>2</sup> production and logistics facilities. The extensive distribution portfolio of displays, touch screens and embedded solutions and the increasingly innovative in-house developments complete the unique modular product portfolio.
