

Direct View LED displays for increased attention

Munich, 19 December 2024

With the new Direct View LED (dvLED) displays (LXP and LXD series) in product offering, DATA MODUL provides a scalable and true-to-life visual experience for a variety of indoor applications like electronic signs, digital signage and seamless video walls.

The new dvLED displays from DATA MODUL have been specially developed for applications where it is important to draw attention to the screen and its content. They are ideal for applications such as real-time displays at traffic junctions, visitor information systems in companies, in entertainment and retail hubs, at the POS and POI as well as many other applications. In combination with DATA MODUL's in-house maXcs software, the displays are already being used successfully in public transport for flight information displays.

The displays are available in two series. LXD is available in 1000x250 and 750x250mm cabinet sizes and offers 1.9, 2.6 and 3.9mm pixel pitch alternatives. While LXP boasts a slimmer and more lightweight cabinet design in the sizes of 1000/750/500x281.25mm which can be scalable into 16:9 LED walls with 1.9mm and 2.6mm pixel pitch options. These two series can also be offered as curved or cornered LED displays and come with different mounting options to adapt to the onsite environment. With a brightness of over 600 nits, a high contrast ratio of 5000:1 and a refresh rate of 3840 Hz, they impress with their excellent image quality. The low energy consumption of the LEDs ensures a long service life, and the uncomplicated front service of the magnetic module facilitates on-site maintenance and thus reduces the total cost of ownership.
